Re: Initiation of Four-Year Review Process: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation

Dear Ambassador Tai:

On behalf of the membership of the Southern Shrimp Alliance and the U.S. commercial warmwater shrimp fishing industry, I am writing to submit a formal request that the action taken by the United States government to impose additional duties on imports of goods and merchandise from the People’s Republic of China be continued. The Southern Shrimp Alliance has previously submitted a request to the Office of the United States Trade Representative (USTR) for the continuation of the July 6, 2018 action¹ and now submits this request for the continuation of the August 23, 2018 action. This request for the continuation of the August 23, 2018 action is timely.²

I. Section 301 Action Background

Section 301 of the Tariff Act of 1974 provides the Administration with the authority to impose trade sanctions on any foreign country that denies “the rights of the United States under any trade agreement” or otherwise employs any “act, policy, or practice” that “unjustifiab[ly] ... burdens or restricts United States commerce.”³ The Act grants the USTR statutory authority to

¹ See Letter from the Southern Shrimp Alliance to the Office of the United States Trade Representative, *Initiation of Four-Year Review Process* (June 30, 2022).

² See Initiation of Four-Year Review Process: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation, 87 Fed. Reg. 26,797 (United States Trade Representative May 5, 2022).

³ 19 U.S.C. § 2411(a)(1)(A)–(B).

“impose duties or other import restrictions on the goods” of any such foreign country as deemed necessary, thereby providing a statutory mechanism to grant relief to domestic interests from unfair trade practices.

In 2017, the USTR first published notice in the *Federal Register* of an Initiation of Section 301 investigation; Hearing; and Request for Public Comments regarding Chinese acts, policies, and practices, to determine whether any such conduct was actionable under Section 301.⁴ The Southern Shrimp Alliance timely submitted comments in support of levying additional duties on aquaculture products imported from China as part of any Section 301 action and demonstrated that China had engaged in unreasonable, discriminatory, or burdensome trade practices that harmed the U.S. commercial shrimp fishing industry.⁵

Additional tariffs as part of the Section 301 action were initially imposed on Chinese goods named on two lists of codes from the Harmonized Tariff Schedule of the United States (HTSUS), the July 6, 2018 action and the August 23, 2018 action (“List 1” and “List 2”, respectively), and later those named on the “List 3 and List 4A modifications[,] as applicable to both” List 1 and List 2 actions.⁶ The Southern Shrimp Alliance submits these comments in full support of the continuation of the additional duties imposed on the Chinese seafood products named in List 3 of the Section 301 action.⁷

II. Request for the Continuation of the August 23, 2018 Section 301 Action

Section 307(c) of the Tariff Act states that any Section 301 action will automatically expire upon completion of a four-year period, unless “the petitioner [or] ... representative of the domestic

⁴ See Initiation of Section 301 Investigation; Hearing; and Request for Public Comments: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation, 84 Fed. Reg. 40,213 (U.S. Trade Representative Aug. 24, 2017).

⁵ See e.g., Letter from the Southern Shrimp Alliance to the Office of the United States Trade Representative, Docket No. USTR-2018-0005; Request for Public Comment Concerning Proposed Determination of Action Pursuant to Section 301: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation (May 11, 2018); Letter from the Southern Shrimp Alliance to the Office of the United States Trade Representative, Docket No. USTR-2018-0005; Posthearing Rebuttal Comments; Request for Public Comments Concerning Proposed Determination of Action Pursuant to Section 301: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation (May 22, 2018); Letter from the Southern Shrimp Alliance to the Office of the United States Trade Representative, Docket No. USTR-2018-0026; Request for Public Comments Concerning Proposed Modification of Action Pursuant to Section 301: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation (July 27, 2018).

⁶ See Initiation of Four-Year Review Process: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation, 87 Fed. Reg. 26,797 (U.S. Trade Representative May 5, 2022).

⁷ See Notice of Modification of Section 301 Action: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation, 83 Fed. Reg. 47,974 (U.S. Trade Representative Sept. 21, 2018).

industry which benefits from such action has submitted to the [USTR] during the last 60 days of such ... period a written request for the continuation of such action[.]”⁸ In May 2022, pursuant to Section 307(c) of the Trade Act, the USTR published in the *Federal Register* a notice initiating its review of the Section 301 actions imposed against Chinese goods four years ago, with a August 22, 2022 deadline to submit requests for the continuation of the August 23, 2018 trade action.⁹

As an organization of shrimp fishermen, farmers, processors, unloading docks, and associated shoreside businesses in the coastal states of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas, the Southern Shrimp Alliance is a representative of a domestic industry which benefits from the August 23, 2018 trade action. Accordingly, consistent with the arguments presented in our May 2018, July 2018, and June 2022 letters, the Southern Shrimp Alliance submits these comments to request a continuation of the additional tariffs on Chinese goods pursuant to Section 301 of the Trade Act of 1974 (19 U.S.C. § 2411), as a representative of the United States domestic commercial shrimp fishing industry, an industry that is a beneficiary of the existing Section 301 action.

The following comments are submitted to explain the beneficial impact that the Section 301 tariffs have provided to the U.S. seafood market and to describe how a continuation of these tariffs will further benefit both our industry and U.S. consumers.

III. The USTR Should Continue the Additional Duties on Chinese Seafood Imports

List 3 imposed additional duties on imports of Chinese seafood products entered under two chapters of the HTSUS: Chapter 3 and Chapter 16.

In 2018, official import data available through the U.S. International Trade Commission’s *Dataweb* indicate that the United States imported over **\$2.8 billion** in seafood imported under the HTSUS codes in Chapters 3 and 16 that were included in List 3.¹⁰ After imposition of the additional duties as part of the Section 301 action, imports of these goods from China fell to less than **\$1.8 billion** in 2019 and then to **\$1.5 billion** in 2020 and **\$1.6 billion** in 2021.¹¹

Although China saw the value of its exports of these goods fall by over \$1 billion between 2018 and 2019—a 36.8% decline—importers quickly transitioned to other sources for seafood products and the value of goods imported under the List 3 seafood HTSUS codes from the rest of the world increased by over half a billion dollars in 2019 compared to the year before.¹² In total, the United States imported **\$21.8 billion** worth of goods from all sources under these HTSUS

⁸ 19 U.S.C. § 2417(c).

⁹ See Initiation of Four-Year Review Process: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation, 87 Fed. Reg. 26,797 (U.S. Trade Representative May 5, 2022).

¹⁰ See Attachment 1.

¹¹ See id.

¹² See Attachment 2.

codes in 2018.¹³ Last year, even with the substantial decline in Chinese imports, the United States imported nearly **\$27.4 billion** of these seafood products. This means that in just three years, the value of seafood imports from the rest of the world increased from \$19.0 billion to \$25.8 billion, a jump of **\$6.8 billion**, representing growth of 35.6% for seafood sourced from everywhere but China.¹⁴

Accordingly, the overall impact of the Section 301 action on seafood imports into the United States has been to shift sourcing away from China. For the U.S. commercial shrimp fishing industry, this means that American importers have been forced to wean themselves off of a dependence on aquacultural production that continues to heavily use banned and harmful antibiotics. Moreover, this significant change in sourcing means that Chinese seafood producers have no longer been able to enjoy an economic advantage in this market because they are not required to mitigate the environmental harm they cause through their operations. As explained in more detail below, the shift away from Chinese sourcing has not only improved the ability of U.S. seafood producers, like those in our industry, to compete on a level playing field but has further reduced risks to consumers and improved the quality of the fish available for sale in our market.

A. **Antibiotic Abuse Remains Pervasive in Chinese Aquaculture**

The prevalence of illegal antibiotic use in Chinese aquaculture has been extensively documented by objective third-party sources. Since the Section 301 action was extended to seafood imports in 2018, published academic studies have continued to document the open and unfettered use of antibiotics in Chinese fish farming, while other studies have focused on the threat that antibiotics in Chinese seafood pose to consumers or the role that antibiotic use in Chinese aquaculture plays in the proliferation of antimicrobial-resistant pathogens. The following is a partial list of relevant published studies that have touched upon these issues since 2018:

As the academics conducting these studies have established, the use of harmful and banned antibiotics remains pervasive in Chinese aquaculture. This conclusion is further supported by the enforcement actions of the U.S. Food and Drug Administration (FDA). In our prior comments, we observed that in the sixteen years spanning from 2002 through 2017, seafood from China, by itself, accounted for fully 42 percent (1,310 of 3,114) of the total number of seafood entry lines refused by the FDA for reasons related to the presence of veterinary drug residues.¹⁵ Remarkably, although the amount of Chinese seafood exports to the United States has significantly declined with the imposition of additional duties as part of the Section 301 action, China’s share of the overall seafood entry lines refused by the FDA for banned antibiotics *has increased* to over 46 percent (271 of 586) between 2018 and July 2022:

¹⁵ See Letter from the Southern Shrimp Alliance to the Office of the United States Trade Representative, [Docket No. USTR-2018-0005; Request for Public Comment Concerning Proposed Determination of Action Pursuant to Section 301: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation](#) (May 11, 2018) at 3.

Moreover, the issues with Chinese seafood continue to encompass a broad spectrum of farmed seafood products. As the Southern Shrimp Alliance has previously observed, this is yet another indication of a widespread problem that has largely gone unaddressed by the Chinese government. The chart below breaks down the individual entry lines of Chinese seafood refused by the FDA for banned antibiotics since 2018 by the four largest types of seafood (eel, shrimp, tilapia, and croaker) involved:

Given these circumstances, a continuation of the Section 301 action for imports of Chinese aquaculture goods inures to the benefit of all but the importers of this merchandise. The Southern Shrimp Alliance strongly believes that the Administration should maintain tariffs on all imports of merchandise produced through Chinese aquaculture as part of any continued action taken pursuant to Section 301. This is particularly true because, as discussed in more detail below, the rapid proliferation of antimicrobial-resistant pathogens poses a substantial threat to the American public and to the global population at large. Moreover, the use of antibiotics in Chinese fish farming could be eliminated or, at the very least, massively curtailed if addressing this problem was to become a priority for the Chinese government.

1. Growing Threat of Antibiotic Resistance

The World Health Organization has maintained that antibiotic resistance is a growing threat at “dangerously high levels in all parts of the world,” identifying several infections that are becoming increasingly difficult to treat due to resistance to antibiotics.¹⁶ One 2015 study tracking the prevalence of antibiotic use in Chinese freshwater aquaculture environments found high concentrations of various antibacterial agents used to treat common infections¹⁷ as well as disturbing levels of “genera associated with pathogens were also observed, such as *Acinetobacter*, *Arcobacter*, and *Clostridium*.”¹⁸ The study concluded that aquaculture ponds are “reservoirs of

¹⁶ See Antibiotic Resistance, World Health Org. (Jul. 31. 2020) <https://www.who.int/news-room/fact-sheets/detail/antibiotic-resistance>; see generally Shao, Yitian, et al., “A Systematic Review on Antibiotics Misuse in Livestock and Aquaculture and Regulation Implications in China,” *The Science of The Total Environment*, Vol. 798, 149205-149208 (July 21, 2021).

¹⁷ See Xiong, W., Sun, Y., Zhang, T. et al. “Antibiotics, Antibiotic Resistance Genes, and Bacterial Community Composition in Fresh Water Aquaculture Environment in China,” *Microbial Ecology*, Vol. 70, 425–32 (Mar. 10, 2015). Antibacterial strains discovered included “sulfametoxydiazine, sulfamethazine, sulfamethoxazole, oxytetracycline, chlorotetracycline, doxycyclintice, ciprofloxacin, norfloxacin, and enrofloxacin.” *Id.* at Abstract.

¹⁸ *Id.*

[antibiotic resistance genes]” and that “the presence of potential resistant and pathogen-associated taxonomic groups in fish ponds had implications for human health.”¹⁹

The 2015 study was the first to ever document the prevalence of certain bacteria, antibiotics, and antibiotic resistance genes in an aquaculture setting.²⁰ Following that groundbreaking analysis, another peer-reviewed 2017 aquaculture study conducted in Shanghai City detected antibiotic residues in 52% of samples collected by the researchers.²¹ The study further concluded that “it is clear that aquatic products have the potential to pose multiple health and [antimicrobial resistance] selection risks in countries where [maximum residue limits] are not strictly enforced.”²² Since then, additional studies have echoed similar concerns regarding antimicrobial-resistant pathogens in Chinese shrimp aquaculture, where the use of antibiotics remains rampant.²³

A failure to discourage the consumption of shrimp and other commodities originating from aquaculture environments in China presents a clear and tangible danger to the health and safety of American consumers. Due to the polluted sources of water and the crowded nature of intensive aquaculture practices in the country, the incentives for fish farmers in China to abuse antibiotics are incredibly high and there is no significant regulatory authority countervailing the abuse of these drugs. Accordingly, there is no meaningful pressure on Chinese producers to cease the overuse of antibiotics in aquaculture food production. The additional tariffs imposed on seafood as part of the Section 301 action have been effective at reducing demand for these products in the United States and has redirected demand to seafood producers that do not present the same threat to American consumers or global health.

As the Southern Shrimp Alliance has previously argued, the continued inclusion of goods produced through Chinese aquaculture in any Section 301 action benefits American consumers. The indiscriminate and unregulated use of antibiotics in aquaculture poses a significant health and safety risk to all Americans, and, because of the spread of antimicrobial-resistant pathogens, to all

²³ See Hong, Bin, et al., “A Comprehensive Research on Antibiotic Resistance Genes in Microbiota of Aquatic Animals,” *Frontiers in Microbiology*, Vol. 9, 1617 (July 26, 2018) (finding that “[r]esults show that [antibiotic resistance genes] pose an alarmingly serious risk in aquatic animals [including pacific white shrimp], which should be paid more attention to by local government.”); see also Wang, Linglong, et al., “Abundance and Removal of Antibiotic Resistance Genes (ARGs) in the Rearing Environments of Intensive Shrimp Aquaculture in South China,” *Journal of Environmental Science and Health Part B: Pesticides, Food Contaminants, and Agricultural Wastes*, Vol. 54, Issue 3, pages 211–18 (Feb. 2019) (finding that “three classes of ARGs ... were detected in the source water, shrimp pond water, effluent and sediment samples” of a shrimp farm located in Maoming, Guangdong Province, China, noting that “[t]he concentrations of target ARGs were significantly higher in shrimp pond water than in the source water and effluent”).

of the world's population. Although by no means all, many major aquaculture producing countries have undertaken substantial steps to eradicate or constrain the use of antibiotics. China, however, has declined to take similar measures, allowing its producers to enjoy unfair (and deeply unethical) competitive advantages over responsible aquaculture producers.

2. *The Chinese Government Has Failed to Meaningfully Address Abuse of Antibiotics in its Country's Aquaculture*

While the Chinese Government is well aware of the overuse of antibiotics in its aquaculture industry, it has not taken meaningful steps to curtail the widespread practice. For instance, "there is no clear division of labor in antibiotic regulation" within any governmental entity in China.²⁴ The Government of China has further failed to allocate sufficient resources to monitor the use of antibiotics in all farming and aquaculture operations, let alone establish proper enforcement mechanisms,²⁵ effectively turning a blind eye to known antibiotic overuse.

Although the Chinese government has recognized the importance of antibiotic misuse and consequent threats to the environment and human health, its regulatory response still "has not yet ca[ught] up with those of major developed countries."²⁶ Notably, none of the policies that China has enacted over the past two decades have specifically sought to address antibiotic use in aquaculture,²⁷ and many policies have yet to be fully implemented.²⁸ The Chinese government also lacks any reliable database or informative source for the public to consult regarding antibiotic data; farmers in China "can freely use antibiotics as long as they have enough animal husbandry experience, because there is no clear restrictive policy [or] normative guidance."²⁹

Given the heavy involvement of the Chinese government in promoting the nation's aquaculture industry through industrial policies and subsidies in order to increase its exports, China's unwillingness to seriously address the broad utilization of antibiotics by fish farmers means that the impact of the additional duties imposed through the Section 301 action protects American consumers.

B. Environmental Impacts of Chinese Aquaculture

The expansion of aquaculture in China has also increased the risks of pollution and depletion of wild shrimp and fish stock. In tropical climates, market-sized shrimp can be raised in

roughly three to six months, yielding multiple crops per year.³⁰ Large scale aquaculture production in China has led to heavy use of chemicals and antibiotics, which in turn pollute groundwater and local ecosystems. Consequently, “antibiotic emissions from agriculture, livestock farming[,] and aquaculture are polluting the entire aquatic environment via direct discharge or soil infiltration.”³¹

Further, many aquaculture products, including shrimp, involve production methods that threaten wild populations. As a general matter, small fish that are worth little in value are harvested in large quantities and thereafter used as an inexpensive food source for farmed shrimp and fish.³² Because such fish are not consumed by humans, they are usually excluded from supply chain monitoring.³³ Nevertheless, because this captured seafood is integral to fish and shrimp farming, aquaculture plays a central role in encouraging overfishing and the depletion of fish populations.³⁴ Shrimp farmers also use wild shrimp to increase the stock of their shrimp ponds,³⁵ therefore, both shrimp farming and wild fishing practices are exploited in tandem, further depleting wild populations of shrimp.

Ultimately, Chinese fish and shrimp farmers are not held to the same environmental and food safety standards as are U.S. aquaculture producers, affording the Chinese industry with an unfair advantage that U.S. producers struggle to compete with. This reality, coupled with the malign use of antibiotics in Chinese shrimp farming, fosters a routine practice of immoral and unethical practices that threaten the health and safety of American consumers while jeopardizing the environment at-large. Because the additional duties implemented as part of the Section 301 action have reduced demand in the United States for these products, they have proven to benefit American seafood industries generally, as well as the American public at large.

IV. The Section 301 Action Has Benefitted the U.S. Commercial Shrimp Fishing Industry

As noted above and set out in greater detail at Attachment 1, with the imposition of additional tariffs as part of the Section 301 action, the value of Chinese seafood imported into the United States declined by 36.8 percent between 2018 and 2021, with the Chinese seafood industry losing over \$1 billion in export revenue. With respect to shrimp specifically, China’s exports of frozen, non-breaded shrimp have declined from \$155.6 million in 2018 *to just \$1.4 million* in

Ambassador Katherine Tai

August 19, 2022

Page 14

2021. This precipitous decline has not resulted in any reduction in the supply of imported shrimp for American consumers, as the total value of all frozen, non-breaded shrimp imports increased by 28.5 percent over the same timeframe. While the volume of Chinese frozen, non-breaded shrimp imports fell from 42.4 million pounds in 2018 to 673,586 pounds in 2021, the total volume of frozen, non-breaded shrimp imported into the United States increased by 414.2 million pounds.

Presently, shrimp import volumes have reached unprecedented levels and pose a substantial threat to our industry. Nevertheless, the additional tariffs on Chinese shrimp in place as part of the Section 301 action have provided the industry with relief from the harm caused by the presence of substantial quantities of Chinese shrimp in the U.S. market. If the Section 301 action against Chinese seafood imports is not continued, Chinese shrimp is likely to attempt to reclaim market share in the United States, placing even further downward pressure on prices in our market.

Throughout 2022, our industry has been confronted with the highest fuel prices we have ever experienced. The massive increase in our costs, coupled with shrimp imports flooding into this market from the rest of the world, means that a failure to continue the additional duties imposed under the Section 301 action would further threaten the livelihoods of the thousands of Americans that populate this industry. Moreover, by welcoming Chinese seafood imports back into the U.S. market, declining to continue the Section 301 action would risk the health and safety of the millions of Americans consume shrimp and seafood.

Continuing the Section 301 action by maintaining additional duties on the seafood products included in the List 3 modification to the August 23, 2018 action would account for the aforementioned acts, policies, and practices associated with the Chinese aquaculture industry that are unreasonable or discriminatory and that burden or restrict U.S. Commerce. At the same time, such action will serve to benefit U.S. consumers by reducing consumption of contaminated products in the U.S. market, as well as by helping to retain thousands of jobs in an important sector of the American workforce.

V. Conclusion

We thank you for your consideration of this request for the continuation of the Section 301 action. I am available to address any questions you might have regarding this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "John Williams".

John Williams
Executive Director
